Wydanie I

Acknowledgments

I would like to thank Professor Jerzy Zybert, for all his comments, constant support, encouragement, and his confidence in me from the very beginning. Without his enormous help throughout my doctoral program, this book would have never been possible.

I wish to thank Professor Suzanne Flynn who introduced me to the research on first language acquisition and bilingualism. I thank her for continuously giving her time to me, for sharing her knowledge, offering support and friendship. The experience I gathered by working together with her deeply influenced me and shaped both my academic and personal lives.

I thank Jan Kozak, the director of Polish Saturday School in Boston, Anna Milewska, the director of Przedszkole Nr 174 in Warsaw, all the teachers, parents and children who participated in the study.

I gratefully acknowledge the financial support from the Kosciuszko Foundation, which allowed me to finish my research project.

I would like to thank my Husband, who encouraged me and supported throughout this process. I am grateful to him and my Mom for their continuous help, their time and encouragement.

Table of Contents

Acknowledgments	5
Table of Contents	7
Specific aims	11
Summary of the chapters	12
Abstract	14
Chapter 1. Bilingualism	17
1.1. From monolingualism to bilingualism	17
1.2. The history of bilingual studies	18
1.3. Defining and measuring bilingualism	18
1.4. Childhood bilingualism	22
1.5. “Blue pachnie jak blueberry”: Interference, borrowing and code-switching .	25
1.6. Bilingualism and its influence on learning	27
1.6.1. Bilingualism and cognitive development	27
1.6.2. Bilingualism and metalinguistic awareness	28
1.7. Conclusions	30
Chapter 2. Theories of First Language Acquisition	32
2.1. Introduction	32
2.2. Rationalist vs. empiricist paradigms	32
2.2.1. Imitation as a model of language learning	34
2.2.2. Behaviorist model of language learning	36
2.2.3. Connectionist model of language learning	37
2.2.4. Chomsky’s arguments for Universal Grammar	39
2.2.4.1. Plato’s problem	39
2.2.4.2. Challenges to the UG model	42
2.3. Relationship between the UG parameters and actual grammatical development	43
2.3.1. The Weak Continuity Hypothesis	43
2.3.2. The Instantaneous Hypothesis	43

2.3.3. The Maturation Hypothesis	44
2.3.4. The Strong Continuity Hypothesis	45
2.3.5. The Grammatical Mapping Paradigm	47
2.4. Can empiricist and rationalist paradigms be reconciled?	48
2.5. Conclusions	49
Chapter 3. Bilingual First Language Acquisition	50
3.1. Introduction	50
3.2. The Unitary Language System Hypothesis	50
3.3. The Dual system hypotheses	51
3.3.1. The Independent Development Hypothesis	52
3.3.2. The Interdependent Development Hypothesis	53
3.4. Critical period in first language acquisition	54
3.5. Defining simultaneous and successive bilingual language acquisition	55
3.6. Role of the UG in second language acquisition.	56
3.6.1. The No Access Hypothesis	57
3.6.2. The Partial Access Hypothesis	57
3.6.3. The Full Access Hypothesis	58
3.7. Conclusions	60
Chapter 4. Linguistic Development: Acquisition of lexicon and syntax. . .	61
4.1. Introduction	61
4.2. Acquisition of lexicon	61
4.2.1. Acquisition of phonology	62
4.2.2. Acquisition of semantics	64
4.3. Acquisition of Syntax	67
4.3.1. Constituent structure	67
4.3.2. Categorization of units: functional and content categories.	67
4.3.3. Phrase structure rules	70
4.3.4. Transformational rules.	71
4.4. Conclusions	73
Chapter 5. Relative clauses: syntactic structure and acquisition	74
5.1. Introduction	74
5.2. Clauses and sentences.	74
5.3. Subordinate clauses in English.	76
5.3.1. Traditional grammar perspective on subordination	76
5.3.1.1. Noun clauses	76
5.3.1.2. Adverb clauses	77
5.3.1.3. Adjective clauses/relative clauses	77
5.3.2. Generative grammar perspective on subordination	78
5.4. Relative clauses and the generative theory of grammar	79
5.5. Patterns of acquisition of relative clause structures	80
5.5.1. Emergence of proto-relatives	80
5.5.2. Primacy of free relatives.	82

5.6. Children's errors in production and comprehension.	84
5.6.1. Pied-piping and prepositional stranding.	84
5.6.2. Resumptive pronouns	85
5.6.3. Grammatical function	85
5.7. Conclusions	88
Chapter 6. Acquisition of subordination in Polish.	89
6.1. Differences between Polish and English grammars	89
6.2. Subordinate clauses in Polish.	90
6.3. Differences between relative clause structures in Polish and English.	90
6.3.1. Relative markers	91
6.3.2. Is <i>co</i> a complementizer?	92
6.3.2.1. Appositive reading	92
6.3.2.2. Pied-piping and stranding the preposition.	93
6.3.3. Subject and Object relative clauses	93
6.3.4. Lexically headed and free relative constructions	93
6.4. Acquisition of RCs in Polish	94
6.4.1. First relative clauses in Polish.	94
6.4.2. Child language versus adult language	95
6.5. Towards a syntactic tree for Polish relative clause structures	98
6.6. Conclusions	100
Chapter 7. The research: methodology and subjects	102
7.1. Design of the study	102
7.2. Method	105
7.2.1. Background on Elicited Imitation Task.	105
7.2.2. Elicited Imitation Task Procedure.	105
7.2.3. Methods of analysis of Elicited Imitation Task.	106
7.3. Subjects.	107
Chapter 8. Research findings	109
8.1. Quantitative results	109
8.1.1. Overall percentage of correct imitations across all structures.	109
8.1.2. Effects of syntactic type on successful imitations	111
8.1.3. Effects of syntactic position on successful imitations.	114
8.1.4. Interactions between position and type	116
8.1.5. Interactions between language and type	117
8.1.6. Interactions between language and position.	118
8.2. Error analysis.	119
8.2.1. Description of error categories	120
8.2.2. Errors in English of bilingual children.	121
8.2.3. Errors in Polish of bilingual children.	123
8.2.4. Errors in Polish of monolingual children	124
8.2.5. Comparison between the three language groups.	126
8.2.6. One clause responses.	127

8.2.7. Changes in word order	128
Chapter 9. Analysis and discussion of research findings	130
9.1. Quantitative analysis.	130
9.1.1. General development of relative clauses in the tested groups	130
9.1.2. Development of the three types of relative clauses in the bilinguals . .	131
9.1.3. Development of the three types of relative clauses in Polish Monolinguals	132
9.1.4. Effects of syntactic position on successful imitation	133
9.1.5. Influence of language on syntactic type and position	134
9.2. Qualitative analysis.	134
9.2.1. Discussion of the results form Polish monolinguals.	134
9.2.2. Discussion of the results form English of bilingual children.	135
9.2.3. Discussion of the results form Polish of bilingual children.	136
9.2.4. Findings from one clause responses	136
9.2.5. Findings from the changes in word order.	137
9.2.6. Discrepancy between the two languages in a bilingual.	137
Chapter 10. Conclusions and implications	139
10.1. Main findings.	139
10.1.1. Autonomous development of two languages in a bilingual	139
10.1.2. No uniqueness of bilingual development; the differences between the monolingual and bilingual can be attributed to insufficient input . .	140
10.1.3. The structure of Polish relative clauses differs from English relative clause structure; nevertheless, monolingual acquisition of Polish and of English is closely related.	141
10.2. Implications	141
10.2.1. Implications for further studies	141
10.2.2. Pedagogical implications.	142

Specific aims

The aim of this study is to investigate the development of relative clause structures in bilingual simultaneous language acquisition of English and Polish as well as in monolingual first acquisition of Polish.

Specifically, this book attempts to answer the following questions:

1. Is the development of two languages in a bilingual child autonomous or is there a certain degree of interference between the two languages? Specifically, will the findings from this research study support the Independent Development Hypothesis or the Interdependent Development Hypothesis?

2. Regardless of the autonomy or interdependence of the patterns of bilingual acquisition, is there any evidence to support Grosjean's famous claim (1989) that a "bilingual is not a sum of two monolinguals"? In other words, is bilingual development unique or rather does the development in each language follow the monolingual patterns? If the latter is true, what is the explanation for the differences between monolingual and bilingual acquisition?

3. Do Polish monolingual patterns of acquisition of relative clauses follow the same course of development as in English? Specifically, are free relative clauses primary in development to lexically headed forms in Polish as it has been reported by Flynn and Lust (1981) for English. In addition, what is the importance of semantic determinacy in the monolingual acquisition of Polish relative clauses?

To achieve the aforementioned goals the research conducted for the purpose of this book involved an Elicited Imitation Task carried out on Polish-American children living in Boston, MA, USA and a monolingual group in Warsaw, Poland.

Summary of the chapters

This book is divided into 11 chapters. The first seven provide a detailed review of past and current literature, while the last four report on the conducted study, its design, results and discussion of findings.

Chapter 1 is indented to provide an introduction to the concept of bilingualism. It attempts to present all existing definitions and classifications of bilingualism as well as to describe other aspects closely connected with this phenomenon, including code mixing and the influence of dual competence on learning.

Chapter 2 discusses first language acquisition from two main viewpoints: rationalism and empiricism. It attempts to explain the key differences between the two approaches by the description of its main theories: imitation, behaviorism and connectionism as examples of empiricist paradigm, and Chomsky's Universal Grammar as an example of the rationalist paradigm. The focus is given to the rationalist perspective.

Chapter 3 describes simultaneous and successive bilingual language acquisitions. It addresses the question whether or not the child has separate linguistic systems for each language she/he acquires. It also discusses the differences between first and second language acquisitions, the critical period hypothesis and the role of Universal Grammar.

Chapter 4 aims at shedding some light on actual linguistic development: the specific areas that have to be acquired and learning strategies adopted by children. This chapter discusses acquisition of lexicon (i.e. phonology and semantics) and syntax, but its focus is on the latter.

Chapter 5 presents literature review on the syntactic structure of relative clauses and their acquisition in English viewed from the traditional grammar approach as well as Chomsky's generative grammar model.

Chapter 6 provides a description of relative clauses in Polish and compares them with relative clause structures in English. It also reviews the available literature on the patterns of acquisition of relative clauses in Polish.

Chapter 7 presents information on the bilingual population living in the United States with a focus on Polish population. It includes the history of

Polish immigration, Polish language schools, Polish initiatives and attitudes towards being a Polish-American.

Chapter 8 reports on a new series of studies that the author has conducted for the purpose of this book. The study involved a group of bilingual children acquiring Polish and English simultaneously as their first languages and a group of monolingual children acquiring Polish as a first language. The chapter describes the design of the study, employed methodology and the participants.

Chapter 9 presents the results from the conducted study. The first part reports on the quantitative results, while the second part presents the analysis of errors.

Chapter 10 provides a qualitative analysis and discussion of the research findings.

Chapter 11 summarizes the main findings and discusses the implications for future research. It also offers some pedagogical recommendations for dealing with bilingual children.

Abstract

Language acquisition remains one of the most debated topics in linguistics and developmental psychology today. Researchers report contradictory evidence due to a great number of individual variations and specifics of each linguistic environment at the same time emphasizing that more research is necessary. Bilingual language acquisition is even more challenging. Linguists and psychologists attempt to describe a typical course of development of the two languages and to propose different hypotheses to account for the processes that occur in all bilingual children.

This book begins with a review of past and current literature on monolingual and bilingual language acquisition and other associated with this phenomenon processes. In order to provide new evidence to the field, it also describes a new series of studies on language groups that has not been researched before. Its focus is on restricted relative clause structures and their acquisition by bilingual English/Polish-speaking children (4;7–6;11, N=18) and by monolingual Polish-speaking counterparts (3;0–6;11, N=40).

The design of the study matched that of a previously conducted English and French monolingual studies (Flynn and Lust, 1981; Foley, 1996), which used the Elicited Imitation Task as a method for data collection.

The results indicate that the patterns of acquisition of relative clauses in English of bilingual children match those for English-speaking monolinguals, while the developmental patterns in Polish of bilinguals do not resemble that of Polish-speaking monolinguals. It is hypothesized that the reason for the discrepancy between the two languages in a bilingual subject lies in the proficiency in each language.

Furthermore, the results revealed that the two languages in a bilingual child develop autonomously and no interference between the two has been found, thus providing additional evidence for Independent Development Hypothesis. It is argued that the reasons for the differences between the two languages cannot be attributed to the uniqueness of bilingual development, but rather to the insufficient input in the linguistic environment.

In addition, the patterns of monolingual acquisition of relative clause structures in Polish differ from the development of these structures in English. No primacy of free relatives in Polish has been found. Moreover, semantic determinacy plays a more important role in the acquisition of relative clauses in Polish than in English implying that the underlying structure of free relatives and lexically headed forms differ between the two languages.

Despite the differences between Polish and English relative clause structures, the monolingual acquisitions of both languages are closely related. The findings corroborate Chomsky's generative grammar framework, the Strong Continuity Hypothesis and the Grammatical Mapping Paradigm.
